

SPACES FOR A BETTER TOMORROW

Clarity for the built environment.

A ZequnWeb website concept for architects, developers, facade consultants, specifiers and project procurement teams.

Illustrative system geometry / not a project drawing

01 / WINDOW SYSTEMS

Explore frame, glazing and opening choices around daylight, ventilation and the project envelope.

02 / CURTAIN WALL SYSTEMS

Coordinate a modular glazed facade with structural supports, joints and envelope continuity.

03 / SLIDING AND DOOR SYSTEMS

Consider access, clear openings, thresholds and the connections between spaces.

Educational concept only. Not for fabrication or installation. No certified product performance.

FROM DESIGN INTENT TO A CLEAR BRIEF

Start with the right questions.

Good architectural system selection links a project brief, comparable evidence and coordinated interfaces. These are concept categories, not a real product catalogue.

04 / SUN SHADING SYSTEMS

Study external louvers with orientation, daylight, glare, views and operational requirements. The interactive demo illustrates motion only.

05 / CUSTOM SOLUTIONS

Frame unusual geometry and project interfaces as questions for the responsible design and engineering team.

Prepare a project conversation

- ☐ Context: building type, location, design stage and procurement programme.
- ☐ Priorities: thermal, acoustic, wind, air and water, daylight and service life.
- ☐ Interfaces: structural supports, slab edges, seals, thresholds and access.
- ☐ Evidence: applicable requirements, exact configuration and supporting reports.

Resources with a clear scope

Download an IFC4 example, an ASCII DXF schematic, a selection checklist and an editable specification template. All are English educational resources and require project-specific professional development before use.

ALUCORE is a fictional brand for this demonstration. No certification, completed-project claim or real supplier service is implied. The enquiry form creates a local downloadable draft and sends no request.
